Perlara scientists are working with highly motivated families and organizations to develop cures for rare diseases and learn how genes work across diseases to map connections to common ailments

We call these exciting journeys of discovery *PerlQuests*™

Launch your PerlQuest™ today!

PerlQuest™
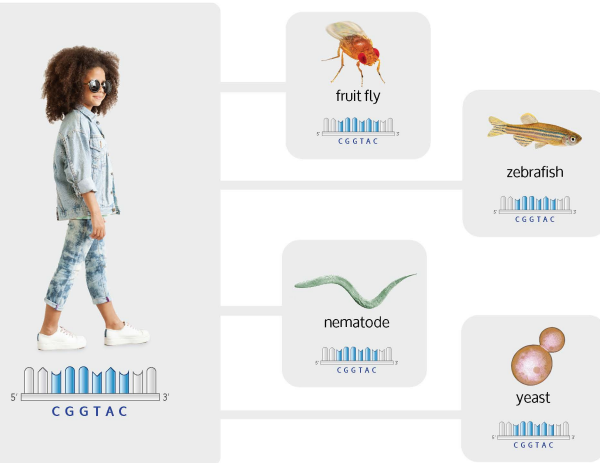

Find new cures for your rare genetic disease

CAGTAC

What's in a *PerlQuest*™?

Some simple animals have genes that are just like yours

fruit fly

C G G T A C

zebrafish

C G G T A C

nematode

C G G T A C

yeast

C G G T A C

5' C G G T A C 3'

Perlara uses gene editing technology to build animal models with your specific genetic mutation and conduct a natural history study to maximize model effectiveness

5' C A G T A C 3'

5' C G T A C 3'
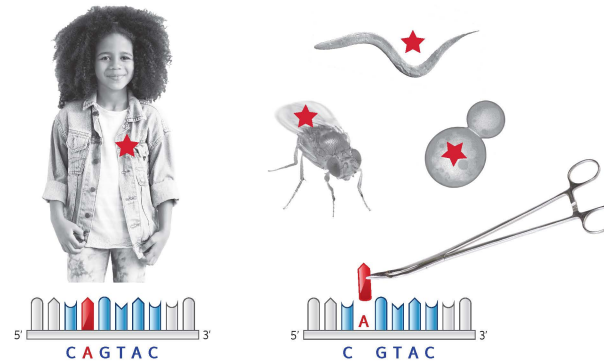

Our PerlArk™ Platform analyzes and screens tens of thousands of existing drugs and new chemical compounds with your PerlQuest animal models to find potential cure candidates within 12 to 24 months

PerlArk™ Platform

Organic Intelligence
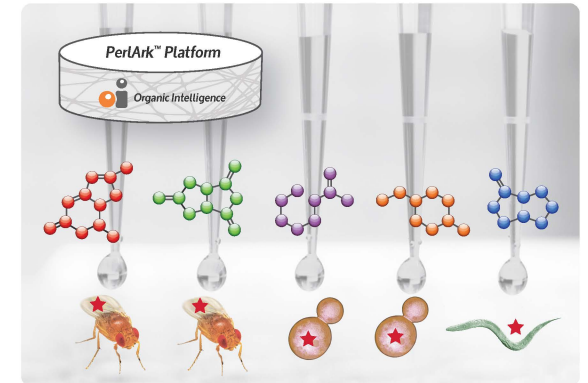

We work with you or your organization as research, business and intellectual property partners to advance PerlQuest drug candidates to clinical trial with BioPharma partners or as a new venture...

...to ultimately find FDA approved cures for your disease, that can lead to cures for other diseases

More Cures!
